TITLE: Certain problems in the theory of O-type backward wave tubes in the presence of reflections

SOURCE: Ref. zh. Fizika, Abs. 10Zh224

REF SOURCE: Sb. Vopr. elektron. sverkhvysok. chastot. Vyp. I. Saratov, Saratovsk. un-t, 1964, 47-56

TOPIC TAGS: Backward wave tube, space charge, electron beam, electron reflection

ABSTRACT: The authors analyze the influence of reflections in the linear mode of a backward wave tube, with allowance for damping in the system and simultaneous allowance for the space charge of the beam and attenuation of the system. The equation for the excitation of the line by the bunched current and the equation for the perturbation of the electron beam by the field of the line yield, when obtaining a solution by the method of successive approximation, a system of equations which determines the starting conditions. By comparing them with the starting conditions of a backward wave tube without reflection, it is possible to find the ratio of the starting currents of a resonant and nonresonant backward wave tube and the change in phase of the signal. Circle diagrams are presented, which give the dependence of these parameters on the modulus and on the phase of the reflection coefficient for different values of space charge and attenuation. Introduction of attenuation of the order of 4-5 db limits the region of variation of the ratio of the starting currents to a value

Card 1/2

ACC NR: AR6013691

0.5-1.5, and the change of the signal phase is limited to values 2.4-4.1. Allowance for the space charge leads to a certain increase in the region of variation of the indicated parameters, but it has a smaller effect than attenuation. A. B. [Translation of abstract]

TITLE: Some problems in the theory of an O-type backward-wave oscillator tube in the presence of reflections

SOURCE: Ref. zh. Elektronika i yeye primeneniye, Abs. 11A156

REF SOURCE: Sb. Vopr. elektron. sverkhvysok. chastot. Vyp. I. Saratov, Saratovsk. - un-t, 1964, 47-56

TOPIC TAGS: backward wave tube, space charge, electron beam

ABSTRACT: The effect of reflections under linear operating conditions in a backward-wave oscillator tube is determined with regard to attenuation in the system and with simultaneous consideration to the space charge of the beam and attenuation. The equation for line excitation by grouped current and the equation for perturbation of the electron beam by the line field are solved by the method of successive approximations to give a system of equations which defines starting conditions. A comparison of these conditions with those for a tube without reflections gives a relationship for the starting currents of resonance and nonresonance backward-wave oscillator tubes and the change in signal phase. Polar diagrams are given for these parameters as a function of the modulus and phase of the reflection coefficient for various space charges and attenuations. Bibliography of 13 titles. A. B. TITLE:

Ivan Nikolayevich Nazarov (Deceased)

PERIODICAL:

Zhurnal obshchey khimii, 1959, Vol 29, Nr 3, pp 701-723 (USSR)

ABSTRACT:

Nazarov was born on July 12, 1906, a son of peasants. In his early youth he became a teacher, but he soon entered the Agricultural Academy imeni Timiryazev and after his graduation as post-graduate student he became the assistant to the well-known chemist and Academician Favorskiy, A. Ye. at Leningrad University. In 1934 he was called to work at the Institute of Organic Chemistry in Moscow, where he remained till the end of his life. In 1935 he was awarded the title of a Candidate of Chemical Sciences in acknowledgment of his work "Metal Ketyls of the Aliphatic and Aliphatic-aromatic Series". From 1936 onward he supervised the investigations of the synthesis of membrane-forming products and began his remarkable work in the chemistry of acetylene and vinyl acetylene. In 1941 he took the degree of a Doctor of Chemistry on the subject "Investigations in the Field of Acetylene Derivatives, the Synthesis of Vinyl Acetylene Alcohols and Their Transformations", and became the Head of the Laboratory for Exact Organic Synthesis. His further scientific

Card 1/2

Ivan Nikolayevich Nazarov (Deceased)

SOV/79-29-3-1/61

and technical activity may be summarized as follows: 1) Organization of the industrial production and application of the carbinol glue invented by him (products that are obtained from the polymers of vinyl acetylene alcohols) for gluing together plastics, metals, glass etc. For this activity carried out during the war he was appointed Corresponding Member of the Academy of Sciences, USSR in 1946. Until his death in 1956, he and his collaborators published, inter al, the following works picked at random: 1) On the Synthesis of Several Physiologically Active, Pain-killing Heterocyclic Compounds Related to the Steroids. 2) On the Synthesis of Natural Terpenes and Terpenoids. 3) Investigations in the Theoretical Field of Stereochemistry and Diene Synthesis. 4) On the Electrophilic Substitution of the Aromatic Hydrocarbons. His publications, known and appreciated also abroad, amount to almost 500. He was also very successfully active in the educational field. More than forty scientific students took the degrees of doctors and candidates of chemical sciences under his guidance. The Government honored him with many decorations. On the whole, his scientific conceptions excelled by profoundness and inventiveness. There are 38 Soviet references.

TITLE:

Diene Synthesis With the Participation of Trans- α -dihydro-
muc onic Acid (Diyenovyy sintez s uchastiyem trans- α -digidro-
mukonovoy kisloty)

PERIODICAL:

Zhurnal obshchey khimii, 1959, Vol 29, Nr 3, pp 775-778 (USSR)

ABSTRACT:

The authors continued their earlier work (Ref 1), concerning cyclic compounds, with a trans-arrangement of the cycles and they further condensed dienes with α, β -unsaturated dicarboxylic acids, of such a structure that the forming cyclic dicarboxylic acids could be transformed into the corresponding transindanone derivatives by subsequent cyclization (Scheme 2). This scheme would offer the possibility of avoiding the complicated and multiple-stage way, per reference 2, which has hitherto been followed in such cases. The condensation of dimethyl ester of trans- α -dihydromuconic acid [(butene-1-dicarboxyl-1,4 acid (I))] was carried out with butadiene and 1-vinyl- Δ' -cyclohexene. In the first case transdiester (II) formed at 210°, the structure of which was proven according to scheme 3 by conversion into the acid (III) (Ref 3). In the same way, the

Card 1/2

SOV/79-29-3-8/61

Diene Synthesis With the Participation of Trans- α -dihydromuconic Acid

condensation of compound (I) with vinyl cyclohexene led to transdiester (IV) which, owing to the migration of the double bond into the o-position between the cycles, could not be hydrogenated with catalysts. The saponification of diester (IV) yielded the corresponding acid, which was proven according to scheme 4. Also the acid (VI), a homologue of dihydromuconic acid, was synthesized according to scheme 5; it could, however, not be condensed with divinyl. There are 5 references, 1 of which is Soviet.

Atsetat Δ^2 -tsiklogeksenol-4-ona-1 i yego kondensatsiya s 1-vinil-6-metoksi-3,4-digidronaftalinom)

PERIODICAL: Zhurnal obshchey khimii, 1959, Vol 29, Nr 3, pp 787-793 (USSR)

ABSTRACT:

In the present paper the authors describe the synthesis of the acetate of Δ^2 -cyclohexenol-4-one-1 (I) and its condensation with 1-vinyl-6-methoxy-3,4-dihydronaphthalene (II). After long and fruitless attempts the authors succeeded in carrying out the synthesis of the ketone (I) (24% yield) (Scheme 3), by the oxidation of the acetate of Δ^2 -hexenol-1 with the tertiary butyl chromate, together with carbon tetrachloride and acetic acid. Its structure was determined by hydrogenation into the known compound (III). The attempt to obtain the ketone (I) from (III) by bromination and dehydrobromination (Ref 2) was unsuccessful, as resinification occurred in all cases (Scheme 4). In the further attempt to obtain compound (I) by

Card 1/2

SOV/79-29-3-11/61

Synthesis of the Steroid Compounds and Their Related Compounds. XLVI. The Acetate of Δ^2 -Cyclohexenol-4-one-1 and Its Condensation With 1-Vinyl-6-methoxy-3,4-dihydronaphthalene

bromination with N-bromo succinimide of ketal of Δ^2 -cyclohexenone-1, with subsequent treatment of potassium acetate and acetic acid, the authors only succeeded in synthesizing phenyl- and diphenyl-ether of ethylene glycol. Compound (I) enters the diene synthesis with certain difficulties. It only reacts with the reactive 1-vinyl-6-methoxy-3,4-dihydronaphthalene (II) at 150-160°, forming a mixture of products, from which the compound (XII) (5% yield), (XIII) and two dimers of the initial diene (XIV-a and XIV-β) could be separated (Scheme 5). There are 12 references, 7 of which are Soviet.

Title : Synthesis of nitro-, amino, and oxy-derivatives of the diphenylethane series

Periodical : Zhur. ob. khim. 24/9, 1674-1684, Sep 1954

Abstract : The synthesis of diphenylethane series hydrocarbons and their conversion into p,p'-dinitro, p,p'-diamino and p,p'-dioxy derivatives are described. The physico-chemical properties of five such hydrocarbons were analyzed. It was established that the presence of two alkyls in positions 1 and 2 of the diphenylethane aids the arrangement of the nitro-groups in p- and p'-positions. The effect of methyl or ethyl positions in the diphenylmethane molecule and the effect of carbon-chain elongation on the yield of the conversion products are explained. Twenty references: 10-USA; 6-USSR; 1-English; 1-French and 2-German (1866-1952).

TITLE: The Training of Specialists in Chemistry - to Attain the Level of New Tasks
(Khimicheskuyu podgotovku spetsialistov - na uroven' novykh zadach) Our
Considerations (Nashi soobrazheniya)

PERIODICAL: Vestnik vysshey shkoly, 1958, Nr 9, pp 28-29 (USSR)

ABSTRACT: The authors consider that the article of Professor I.N. Putilova and Docent G.A. Raytsyn in Nr 7 of this periodical was published at the proper time, as it substantiates the necessity to bring the teaching of chemistry closer to the speciality of the respective vtuz, to revise the theoretical part of the course's program and to entitle the various vuzes to compose their own programs according to their individual sections. The authors (personnel of the Chairs of Inorganic and Organic Chemistry of the Novocherkassk Polytechnical Institute) set forth in the present article their considerations on the suggestions of I.N. Putilova and G.A. Raytsyn and describe how instruction in chemistry is organized in the Institute's various faculties. Since the number of students coming from plants is increasing year to year, and as many of them require a review course, the most important sections of elementary chemistry should be retained. The idea of specializing chemistry according to the type of vuz is absolutely correct. There is 1 Soviet reference.

SOURCE: Izobret prom obraz tov zn, no. 14, 1966, 128-129

TOPIC TAGS: valve, hydraulic piston drive, pneumatic piston drive, *hydraulic device,*
pneumatic device, piston engine 14

ABSTRACT: The proposed valve with a hydraulic or pneumatic piston drive is designed
for opening and closing the through flow-section of main and auxiliary pipings. In
order to synchronize the opening and closing of both pipings, its control piston is
provided with an annular groove, which, in the open valve position, connects the

The range of low-voltage arc in inert gases. Radiotekh. i elektron.
2 no.4:494-501 Ap '57. (MLRA 10:9)

1. Moskovskiy elektrolampnyy zavod.
(Electric discharges through gases)

TORGONENKO, K. YE.

AUTHOR: Nedospasov, A.V. and Torgonenko, K.Ye.

109-4-15/20

TITLE: The Region of Low-voltage Arc in Inert Gases. (Oblast' nizkovol'tnoy dugi v inertnykh gazakh)

PERIODICAL: Radiotekhnika i Elektronika, 1957, Vol.2, No.4, pp. 494 - 501 (USSR).

ABSTRACT: In an earlier work [Ref. 1] one of the authors attempted to give the theory of the low-voltage of low-pressure arc discharges. The resulting formulae were not very accurate and did not always agree with the available experimental data (e.g. see Ref.3). A new formula for the electric charge distribution in the low-voltage region of a cylindrical tube of radius r_0 is therefore proposed; the charge density as a function of radial and axial distances (r and z) is in the form:

$$n(r, z) = \dots \quad (5)$$

where μ_a satisfies the transcendental equation:

$$\mu J_1(\mu) = \dots \quad (6)$$

in which U_p and U_e are the temperatures of ions and electrons (expressed in electron-volts), λ_p is the mean free path of card 1/3 the ions and c is a dimensionless quantity which can be

The Region of Low-voltage Arc in Inert Gases.

109-4-15/20

determined from the condition that Q is equal to the diffusion current at the walls of the tube; D_a is the diffusion coefficient. Eq.(5) can be used to derive an expression for the axial field in the tube and to determine the length D of the low-voltage arc. It is shown that:

$$D = \frac{r_0}{\mu_1} \ln \left(\frac{k b_e e_o Q}{b_p i} \right) \quad (8)$$

where i is the current and $k = 2\pi c \int_1 (\mu_1) a_1$.

The low-voltage arc region was also investigated experimentally. The measurements were carried out in three cylindrical tubes (with diameters of 62, 36 and 23 mm) which were fitted with moving disc-shaped anodes; the cathodes were in the form of a small filament which could be heated in order to initiate an arc discharge; one of the tubes was fitted with a moving probe which was used in measuring the diffusion current at the walls. Length of the low-voltage arc was measured in Kr, Ar, Ne and Ar + Hg as a function of pressure p at a current of 0.3 A

Card2/3 (Fig.4). It was found that D can be expressed as:

The Region of Low-voltage Arc in Inert Gases.

109-4-15/20

$$D = \frac{r_0}{a} \ln \frac{A}{p} \quad (10)$$

where a and A are constants. Density of the ion current diffusing to the walls was measured as a function of the distance from the cathode for gas pressures ranging from 2 to 10 mm Hg (Figs. 5 and 7). An experimental curve of the cathode-fall of potential as a function of pressure was also taken (Fig.8). The theory and the experimental data given in this article are only very loosely related.

There are 8 figures and 7 references, of which 6 are Slavic.

TITLE: Flame propagation in laminar and turbulent flows

SOURCE: Inzhenerno-fizicheskiy zhurnal, no. 10, 1964, 28-36

TOPIC TAGS: flame propagation, laminar flow, turbulent flow, combustion

ABSTRACT: The proposed theory of flame propagation in turbulent flows of mixed gases is based on the assumption that under certain conditions the known differential equation of thermal conductivity is applicable to both laminar and turbulent flows. According to this theory, flame propagation in a turbulent flow may be calculated by taking account of the dependence between the time average parameters of combustion (temperature, concentration, flow velocity, density, and the reaction rate) and the turbulent exchange characteristics, E_T/ud (where E_T is the turbulent exchange coefficient, u is the gas
